Exotic Butterfly and Insect list

North American Butterfly list

This is a complete list of K & K Imported Butterflies

We are also in the process on adding new species, that have never been imported.  
You will need to apply for an interstate transport permit to get the exotic species.  
We will be happy to assist you in any way with filling out the your PPQ526

Thank You Kraig and Ken

There is a distinction between import and interstate permits.

The two functions/activities can not be on one permit.

You are working with an import permit, thus all of the interstate functions are blocked. If you have only a permit to import you will need to apply for an interstate transport permit to get the very same species from a domestic distributor.

If you have an import permit (or any other permit), you can go into your ePermits account and go to my applications, copy the application that was originally submitted, thus a Duplicate application is produced. Then go into the "Origination Point" screen, select the "Change Movement Type" button.

Go to Movement Type and change "import" to "interstate".  
Add current date in the "Approximate Date(s) of Initial Import or Movement:".  
Select "Continue". The next screen will say "Changing the movement type will permanently delete all associated Movement data.  
Would you like to continue?" CLICK "OKAY".  
Now select the "Multiple State" button. In the next page left side will say Regulated Article(s) Included Select (Check All):

Check "Minnesota"
